

KM *Edge* DESIGN

HOSHIZAKI's signature
crescent shape... With an edge!

KM *Edge* EVAPORATOR

- Increased efficiency with maximized surface area
- Faster harvest cycle for increased production
- Increased bonded surface area creates a stronger, more durable structure

FEATURES & BENEFITS

- Dual-sided stainless steel evaporator has oval-shaped copper refrigerant tubing for the most efficient heat exchange
- HOSHIZAKI's evaporator design freezes the cleanest water, rinsing-out most of the minerals and impurities; resulting in individual, crystal clear **KM *Edge*** cubes
- CycleSaver™ design allows production of the same amount of ice in half the cycles of other ice machines – extending the life of the equipment

HOSHIZAKI | vs Grid Cell

HOSHIZAKI
KMEdge CUBE

EVAPORATOR DESIGN

Double-sided, smooth, stainless steel continuous surface makes the same amount of ice in half as many cycles.

ICE CREATION

Impurities are flushed away each cycle leaving hard, crystal-clear ice that lasts longer and has better displacement.

HARVEST

KMEdge cubes come off individually for consistent cube size and no ice clusters.

CLEANING

Open stainless steel surface stays clean and is easy to service for longer life and reliability.

COMPETITOR GRID CELL
RHOMBROID CUBE

Plated metal that is welded into a grid can chip and peel over time due to expansion and contraction.

Turbulent water over the grid cell design traps air and impurities causing soft, cloudy ice that melts faster. *Blue represents impurities trapped in ice.*

Ice cubes come off as one big sheet leaving clusters that don't fit in cups/glasses.

Grid is difficult to clean. A dirty evaporator can cause diminished production, increased service cost and premature equipment failure.
